Experience

Founding Engineer

Bread Butter (bb.bio) · Remote · July 2026 – present

- Own the AI stack end to end for **bb.bio**, a creator portfolio platform; built and shipped **AI onboarding** that turns a creator's social media into 3 portfolio drafts in **~3.6s** for **under $0.01 each**, with **zero failed LLM calls** in production.
- Built an eval and **DSPy GEPA** optimization loop on 52 real-user cases, lifting held-out quality **from 0.52 to 0.74** on the cheaper Flash model and cutting input tokens **66% per user**.
- Built the pipeline that imports creators' Instagram/YouTube posts into their portfolios and feeds AI drafts; caught a cost-tracking bug that under-reported scraping spend **~10x**.
- Launched the bb.bio **waitlist gate** across 4 sign-in methods with an admin approval console, pre-generating AI portfolios for **98 waitlist creators**.
- Built creator analytics end to end: fixed visitor tracking that left **100% of signups** unattributed, shipped a creator-facing audience dashboard, and live analytics APIs answering in **6-17 ms at 3x production volume**.
- Set the "evals before features" release gate, wrote architecture decision records, and mentored a new engineer.

SDE 2

VideoVerse · Remote · Jan 2026 – June 2026

- Built SmartThumbnails from scratch — an AI-powered thumbnail selection service that processed **4,500+ clips in its first month with a 99.2% client acceptance rate**, effectively eliminating manual thumbnail curation from broadcast workflows.
- Added multi-language, EPG metadata, and AI tagging support to the export pipeline, **processing 11,000+ clips monthly** and letting broadcast clients localize content without manual work.
- Automated conflict detection and metadata back-fill across sibling clips, reducing manual editorial effort and **SLA breaches by 25%**.

SDE 1

VideoVerse · Remote · Nov 2024 – Jan 2026

- Built an internal LLM evaluation pipeline using Langfuse and DSPy Evaluate, improving model output accuracy **from 68% to 92%**.
- Applied automated prompt optimization using DSPy's **MIPRO/COPRO** optimizers and **GEPA**, lifting task-level accuracy **from 30% to 87%**.
- Built a centralized **AI Gateway** (auth, tracking, auto-retriggers) for 5 AI services, processing **50k+ clips and 300+ streams monthly**.
- Engineered an LLM-powered video clip ratings pipeline using DSPy, handling over **500k clips per month**

Software Engineer Intern

VideoVerse · Remote · June 2024 – Nov 2024

- Interned at **LetsDive.io** (acquired by VideoVerse) as a Django backend engineer; led the **Python 3.9 to 3.11** migration and built an ETL pipeline with **sub-100ms latency**.

Projects

Battlefield Portal Library | bfportal.gg | https://gh.bfportal.gg

Jan 2022 – present

- Built a Django-based CMS serving **17,000+ users**, with a full frontend built on Jinja templates — currently migrating to **HTMX** for faster, dynamic interactions without a JavaScript framework; Dockerised with GitHub Actions deploys.

Gametools Network | gametools.network | github.com/community-network

May 2022 – present

- Developed and maintain an open-source Stats API serving **3 million players**, handling over **2 million daily requests** via Envoy proxy and Cloudflare caching.

Skills

AI / ML: DSPy, LiteLLM, MIPRO/COPRO, GEPA, Langfuse, MLflow, Google Gemini, VertexAI, LLM Evaluation & Optimization

Backend: Python, TypeScript, Go, FastAPI, Node.js/Express, Next.js, Django, PostgreSQL, MongoDB, Redis, BullMQ, PostHog

Infrastructure: AWS, Terraform, Docker, OpenTelemetry, Grafana, Nginx, GitHub Actions, Envoy

Education

MIET

B.Tech in Computer Science Engineering, Minor in Data Science

Meerut, Uttar Pradesh · Jan 2020 – Jan 2024
