Experience

SDE 2	<i>Remote</i>
<i>VideoVerse</i>	<i>Jan 2026 – present</i>
◦ Built the SmartThumbnails service from scratch, a FastAPI app using PySceneDetect for scene segmentation, Laplacian sharpness scoring for frame filtering, and Google Gemini via DSPy for AI-driven thumbnail selection. ◦ Automated clip enrichment at scale via an event-driven pipeline, making every clip searchable and tagged the moment it's ingested. ◦ Added multi-language, EPG metadata, and AI tagging support to the export pipeline, letting broadcast clients localize content without manual work ◦ Automated conflict detection and metadata back-fill across sibling clips, reducing manual editorial effort and SLA breaches by 25%. ◦ Shipped an API that unified a broadcast client's scheduling data into a single queryable source, replacing fragmented manual imports. ◦ Migrated from Datadog to OpenTelemetry, giving the team vendor-neutral structured observability and faster production debugging.	
SDE 1	<i>Remote</i>
<i>VideoVerse</i>	<i>Nov 2024 – Jan 2026</i>
◦ Built an internal LLM evaluation pipeline using Langfuse and DSPy Evaluate, improving model output accuracy from 68% to 92%. ◦ Applied automated prompt optimization using DSPy's MIPRO/COPRO optimizers and GEPA, lifting task-level accuracy from 30% to 87%. ◦ Developed a centralized API Gateway for managing and routing all internal and external LLM requests. ◦ Engineered an LLM-powered video clip ratings pipeline using DSPy, enabling automated content analysis and quality feedback. ◦ Established monitoring and alerting workflows using Langfuse and OTEL to enforce SLA compliance. ◦ Led migration of entire AWS infrastructure to Terraform, improving infrastructure-as-code practices.	
Software Engineer Intern	<i>Remote</i>
<i>VideoVerse</i>	<i>June 2024 – Nov 2024</i>
◦ Designed and implemented an ETL pipeline with sub-100ms latency to optimise data processing. ◦ Built a service hydration layer to enrich Amazon SNS notifications with additional contextual data.	
Backend Intern	<i>Remote</i>
<i>DiveAI</i>	<i>Nov 2023 – Apr 2024</i>
◦ Resolved critical production issues in notification and Google Calendar integrations. ◦ Upgraded backend from Python 3.9 to 3.11.	

Projects

Battlefield Portal Library bfportal.gg https://gh.bfportal.gg	<i>Jan 2022 – present</i>
◦ Built a Django-based CMS platform serving over 17,000 users with a personalised content and user system. ◦ Containerised with Docker and automated deployments via GitHub Actions.	
Gametools Network gametools.network github.com/community-network	<i>May 2022 – present</i>
◦ Developed and maintain an open-source Stats API serving 3 million players, handling over 2 million daily requests via Envoy proxy and Cloudflare caching.	

Skills

AI / ML: DSPy, GEPA, Langfuse, MLflow, Vertex AI, Gemini, DSPy Evaluate

Languages: Python, Go, TypeScript

Backend: FastAPI, Django, PostgreSQL, MongoDB, Redis

Infrastructure: AWS, Terraform, Docker, OpenTelemetry, Nginx, Envoy, Grafana, Datadog

Education

MIET	<i>Jan 2020 – Jan 2024</i>
<i>B.Tech in Computer Science Engineering, Minor in Data Science</i>
