Experience

Founding Engineer — *Remote*
Bread Butter (bb.bio) — *July 2026 – present*

- Own the AI stack end to end. Built **ai-core** from scratch as a **Python/uv** monorepo (**DSPy/LiteLLM** model factory, eval harness, **FastAPI** base), deployed to **AWS ECS Fargate** with **GitHub Actions OIDC** image promotion.
- Built the onboarding AI service on **Gemini (Vertex AI)**: a selection call plus 3 concurrent writers turn scraped social media into 3 profile drafts as Postgres-backed async jobs, at **~$0.013 per user** after cutting input tokens **66%**.
- Built an eval harness (F1 terms + human-calibrated **LLM-as-judge**) on 52 production ground-truth cases and ran **GEPA** optimization, lifting held-out score **from 0.52 to 0.74**, with prompts, traces, and cost tracked in **Langfuse**.
- Built the social-scrape to AI-drafts pipeline in **Node/TypeScript** on **BullMQ/Redis, Apify, S3**, shipped dark behind feature flags with idempotent retries and a self-heal path for silently dead generations.
- Designed the bb.bio waitlist gate across 4 sign-in methods using **Postgres advisory locks, Cloudflare Turnstile**, a **Redis** rate limiter, RBAC + audit-logged admin console, and **Customer.io/WhatsApp** notifications; cut onboarding **from 8 screens to 3** in **Next.js**.
- Built creator analytics across the stack: **PostHog** HogQL + Redis backend, live endpoints over a partitioned Postgres event table with keyset pagination (**6-17 ms at 3x prod volume**), and a **Next.js/TanStack Query/d3-geo** dashboard pinned to a SHA-verified JSON contract.

SDE 2 — *Remote*
VideoVerse — *Jan 2026 – June 2026*

- Designed and built **SmartThumbnails** from scratch in **Python/FastAPI** — reverse-engineered selection heuristics from client-published thumbnails into a layered pipeline: **PySceneDetect** scene segmentation, Laplacian sharpness filtering, and **DSPy**-structured Gemini for final selection. Reached **99.2% client acceptance** across the first 4,500 clips, replacing manual curation.
- Engineered a hybrid algorithmic + LLM pipeline for sibling-clip metadata back-fill and conflict detection, with batched updates that respect hard SLA windows — cut **SLA breaches by 25%**.
- Owned the **Datadog → OpenTelemetry** migration end to end: cross-service instrumentation and the collector pipeline.

SDE 1 — *Remote*
VideoVerse — *Nov 2024 – Jan 2026*

- Built an LLM eval harness from scratch (datasets, metrics, **Langfuse**), driving ground-truth analysis that lifted accuracy **from 68% to 92%**.
- Tuned and applied **DSPy MIPRO/COPRO** and **GEPA** prompt optimizers per service for thumbnail selection and metadata generation, raising task-level accuracy **from 30% to 87%**.
- Built a **FastAPI AI Gateway** for 5 AI services with token auth and **HTTPX** retry/backoff: **zero dropped jobs** across 50k+ clips/month.
- Engineered a **DSPy + Gemini** clip-ratings pipeline on **500k+ clips/month** with rate-limit-aware scheduling to meet SLAs.

Software Engineer Intern — *Remote*
VideoVerse (joined via acquisition of LetsDive.io) — *June 2024 – Nov 2024*

- Built an ETL feed from **PostgreSQL/MongoDB** into **BigQuery** with **sub-100ms** latency, and rewrote the thumbnail service storage from **SQLite to PostgreSQL** with face-embedding ingestion.

Projects

Battlefield Portal Library | bfportal.gg | https://gh.bfportal.gg — *Jan 2022 – present*

- **Django/Jinja** CMS, currently migrating templates to **HTMX** for dynamic interactions without a JavaScript framework; **Cloudflare** edge caching, Docker containerization, and GitHub Actions CI/CD.

Gametools Network | gametools.network | github.com/community-network — *May 2022 – present*

- Open-source Stats API behind **Envoy** routing into a **Kubernetes** cluster, serving **2M+ daily requests**. Extended the existing Envoy logic and authored the Kubernetes autoscaling policies for upstream services.

Skills

AI / ML: DSPy, LiteLLM, MIPRO/COPRO, GEPA, LLM-as-judge, Langfuse, MLflow, Google Gemini, VertexAI, LLM Evaluation & Optimization

Backend: Python, TypeScript, Go, FastAPI, Node.js/Express, Next.js, Django, PostgreSQL, MongoDB, Redis, BullMQ, BigQuery, PostHog

Infrastructure: AWS (ECS Fargate, SNS, S3), Terraform, Docker, Kubernetes, OpenTelemetry, Grafana, Envoy, Cloudflare, GitHub Actions

Education

MIET — *Meerut, Uttar Pradesh*
B.Tech in Computer Science Engineering, Minor in Data Science — *Jan 2020 – Jan 2024*
